Amendment of the claims under Article 19(1) (Rule 46)

International Application No. : PCT/JP2004/001425

International filing Date : 10.02.04

Applicant : CANON KABUSHIKI KAISHA
3-30-2, Shimomaruko, Ohta-ku,
Tokyo 146-8501 Japan
Phone : (03) 3758-2111

Agent : Patent Attorney KATO, Nobuaki
No. 602, Fuji Bldg.,
2-3, Marunouchi 3-chome
Chiyoda-ku, Tokyo 100-0005 Japan
Phone : (03) 3213-1561

Applicant's or Agent's File Reference : CF017897WO

Dear Sir:

The Applicant, who received the International Search Report
relating to the above-identified International Application
transmitted on May 11, 2004, hereby files amendment under Article
19(1) as in the attached sheets.

(cont.)

International Appln. No. PCT/JP2004/001425

IC20 Rec'd PCT/PTO 32 AUG 2005

The Applicant hereby replaces sheets No. 54 through 59 with the attached sheets. The claims 1, 2, 6, 8, and 9 are amended, and claims 3, 4, 5, 7, 10, 11, 12, 13, 14, 15, and 16 are unchanged.

Very truly yours,

O K A B E

International Patent Office

for Nobuaki Kato

Attachment:

(1) Amendment under Article 19(1)

6 sheets

JC20 Rec'd PCT/PTO 02 AUG 2005

CLAIMS

1. (Amended) A data processing method of an image processing system in which a server apparatus and a data processing apparatus communicate with each other to perform a predetermined data process,
5 comprising:

a storing step of storing an electronic data in the data processing apparatus;

a first extraction step of extracting a feature
10 information of the electronic data to be output to a printer apparatus stored in the data processing apparatus;

a first transmission step of transmitting original specifying information including the feature
15 information extracted in said first extraction step and a user ID for discriminating a print requester of the electronic data but not transmitting the electronic data stored in the data processing apparatus, to the server apparatus;

20 a control step of controlling generation of print data to be output to the printer apparatus, on the basis of original certification information notified by the server apparatus and the electronic data stored in the data processing apparatus; and

25 a print step of causing the printer apparatus to print the print data generated in said control step and information indicating that the print data

corresponds to an original.

2. (Amended) A data processing method according to Claim 1, further comprising:

5 a second extraction step of extracting additional information included in an original certification print image to be output to the printer apparatus based on the print data generated in said control step;

10 a second transmission step of transmitting to the server apparatus update information including the additional information extracted in said second extraction step, a new feature information extracted from new electronic data in said first extraction
15 step, the feature information and the user ID;

 an administration step of receiving the original specifying information transmitted from the data processing apparatus, registering the received information in a storage unit, and administrating the
20 registered information;

 an update step of updating the content of the original specifying information, by verifying the update information transmitted from the data processing apparatus and the original specifying
25 information; and

 a notification step of, when original certification printing is requested by the data

processing apparatus, notifying the data processing apparatus of the original certification information to be added to the electronic data, by referring the original specifying information transmitted from the data processing apparatus and the original specifying information registered in the storage unit.

3. (Unchanged) A data processing method according to Claim 2, wherein said administration step performs file administration of the original specifying information and administration information of the original specifying information.

4. (Unchanged) A data processing method according to Claim 2, wherein said update step updates administration information stored in the storage unit.

5. (Unchanged) A data processing method according to Claim 4, wherein the administration information includes a registration number, a registration date, version information, an update history and a confirmation history for administrating the original specifying information.

6. (Amended) A data processing method according to Claim 2, wherein said update step updates any one

of a registered registration date, a feature information, version information, and an update history included in the information stored in the storage unit.

5

7. (Unchanged) A data processing method according to Claim 2, further comprising:

a confirmation step of, when original confirmation is requested by the data processing apparatus, confirming originality of the original specifying information by referring the original specifying information transmitted from the data processing apparatus and the original specifying information registered in the storage unit; and

15 a confirmation notification step of notifying the data processing apparatus of a confirmation result in said confirmation step.

8. (Amended) A data processing method according to Claim 2, wherein the storage unit stores, as administration information, information specifying a date when the feature information is recorded.

9. (Amended) A data processing method according to Claim 1, wherein said control step adds the feature information to the print data as a digital watermark.

10. (Unchanged) A data processing method according to Claim 1, wherein said control step adds area information, for inputting signature information, to the print data.

5

11. (Unchanged) A data processing method according to Claim 10, further comprising a step of extracting a signature image drawn in the area information added in said control step, and
10 transmitting the extracted signature image to the server apparatus.

12. (Unchanged) A data processing method according to Claim 1, further comprising a step of,
15 when reprinting is requested by the data processing apparatus, notifying the data processing apparatus of administration information to be added to the electronic data, by referring the original specifying information transmitted from the data processing
20 apparatus and the original specifying information registered in the storage unit.

13. (Unchanged) A data processing method according to Claim 12, further comprising a
25 confirmation step of, when the reprinting is requested by the data processing apparatus, confirming determination as to whether or not to

perform the printing by referring restriction information.

5 14. (Unchanged) A data processing method according to Claim 13, wherein the restriction information indicates the maximum number of printing of the electronic data or an upper limit value of the number of printing of the electronic data.

10 15. (Unchanged) A data processing method according to Claim 13, wherein the restriction information is original specifying information for specifying a user other than registered users who can print the electronic data.

15 16. (Unchanged) A data processing method according to Claim 13, wherein the restriction information indicates a date or a time when the electronic data can be printed.
